

Follow these 6 steps to enable Hardware Acceleration in your browser settings.

1. Open Microsoft Edge.
2. In the upper-right corner of the window, click the  icon.
3. Select **Settings** from the **drop-down menu**.

4. On the left side of the window, under the *Settings* section, click the **System** selector.
5. Under *System*, click the **toggle switch** next to **Use hardware acceleration when available** to enable or disable hardware acceleration.

6. When you've made your selection, click the  button.
