Follow these 6 steps to enable Hardware Acceleration in your browser settings.

1. Open Firefox.

2. Click the ☰ icon.

3. Select **Options** from the drop-down menu.

⫿⫿\ Library		>
✚ Add-ons		Ctrl+Shift+A
✿ Options		
✎ Customize...		
Open File...		Ctrl+O
Save Page As...		Ctrl+S
🖨 Print...		
🔍 Find in This Page...		Ctrl+F
More		>
Web Developer		>
⑦ Help		>
⏻ Exit		Ctrl+Shift+Q

4. On the left side of the window, make sure the **General** tab is selected.

- ✿ General
- 🏠 Home
- 🔍 Search
- 🔒 Privacy & Security
- ⟳ Firefox Account

Rakha Al-Khaleej International L.L.C
(Paid up capital AED 10 million)

5. In the middle section of the window, scroll down to the *Performance* section, and click the box next to **Use recommended performance settings** so it's unchecked.

Performance

☑ Use recommended performance settings   Learn more

These settings are tailored to your computer's hardware and operating system.

ComputerHope.com
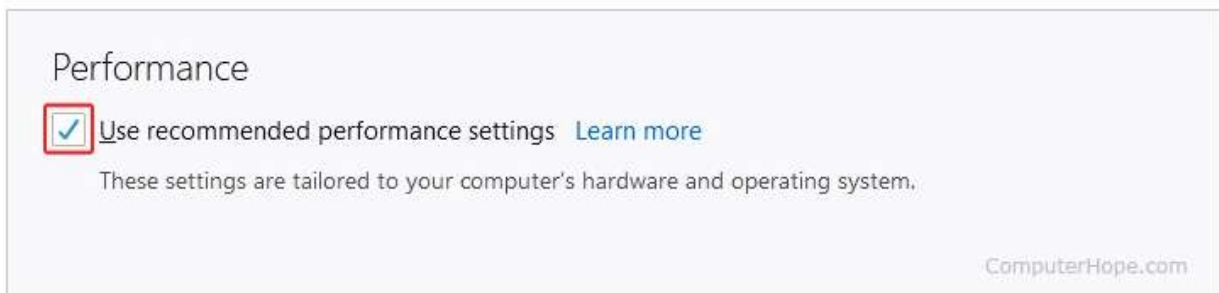

6. Once you've unchecked the box, you'll see additional options. Click the check box next to **Use hardware acceleration when available** to toggle hardware acceleration on or off.

Performance

☐ Use recommended performance settings   Learn more

These settings are tailored to your computer's hardware and operating system.

☑ Use hardware acceleration when available

Content process limit   [8 (default)   ˅]

Additional content processes can improve performance when using multiple tabs, but will also use more memory.
